

I usually don't open email solicitations, but in this case it seemed all too interesting. A machine to aid in the worst task a restoration contractor faces, overhead removal of concrete. The people from PAM came out and let us use their new machine, I am very skeptical of any new gimmick, but this one looked to be well thought out. We set up to chip overhead rib repairs, I was the first to try it out, after running it for 3 minutes and getting about 1 foot per minute, I told Sylvain this is a no brainer and wrote out the check. After a year the arm has performed excellent with no break downs and minimal maintenance.
