

RNP Industries has taken a step forward to help us meet the ICRI Vision 2020 goal to design worker friendly equipment that reduces or eliminates vibrations, weight and impact of concrete removal tools. Not only will it greatly reduce worker fatigue and injury, It is also an incredibly productivity tool that will pay for itself with the increase in production. The feedback from employees using the P.A.M. is that we have improved the safety, production and quality of their work. The P.A.M. significantly reduces the risk of injury during overhead and vertical chipping. From now on, the P.A.M. will always be in the back of my head when it's time to evaluate which tool will be best for the next job site involving concrete removal.
